Non-Tapered Round Aluminum or Steel

THE COPPER CREEK

BLUE MOUNTAIN

OKANAGAN

For many years, King has concentrated on bringing the finest in historically accurate and contemporary decorative poles to the market, whether in spun concrete, ductile iron, steel, or cast and extruded aluminum. Almost all of these designs have been based on heavy-duty requirements and, as the market gradually changes, King is once again responding to the needs of today. The Regal family of Stellar poles provides a series of aesthetically pleasing, light to medium duty, decorative poles that represent a significant step up from utilitarian standards, yet is essentially cost effective. The use of non-tapered shafts with decorative clamshell bases provides both a decorative look at a competitive cost and flexibility of design.

Description

The Regal family consists of designs that incorporate the combination of a 4" pole with a cast aluminum clamshell base. Pole shafts are available in round aluminum or round steel, permanently welded to a compatible base plate. The various bases provide the decorative character to the assembly, while also concealing the wiring handhole, anchor bolts, and base plate. Four stainless steel bolts, recessed for minimum visibility, hold the two-piece clamshell base together. All designs may be configured to accept either post top or pendant luminaires. King also offers a wide range of single, twin and multiple arms and brackets, including finely detailed historical reproductions, contemporary, and theme styles.

Finish

The complete pole assembly shall have a powder coat finish, which utilizes our "KingCoat" paint system, offering a durable, long-lasting finish. For color selection, please see our KingCoat color brochure in our catalog or website.
