Socket Mounting - A Viable & Economic Alternative to Base Plate Mounting

Socket mounting and base plate mounting are very similar. The footing size is the same and the internal reinforcing is similar; The major difference is that instead of anchor bolts, a socket is formed into the base. The pole is then set into the socket and grouted into place with non-shrink grout.

Advantages of Socket Mounting:
- Base cost savings - less concrete is needed and expensive anchor bolts are not required
- Easy installation - precision fit and lining up anchor bolts is not required
- Pole cost savings - expensive base plate not required
